

ADVANCED VIDEO PRODUCTION

Dark Mode Course Design Guide

Mastering the aesthetics of #121212 dark-mode course production for maximum student engagement and reduced cognitive load.

Section 01

The Core Visual System

| Primary Color Palette Strategy

The Matte Base

Use **#121212** as the foundational background. It prevents pure black crushing while maintaining deep contrast for high-end displays.

Text Legibility

Avoid pure white (**#FFFFFF**). Use **#E0E0E0** for body text to reduce eye fatigue during long coding sessions or technical lectures.

| Typography & Information Hierarchy

- A Inter (Sans-Serif):** The primary UI font. Optimized for legibility at small sizes in lower thirds and call-outs.
 - </> Fira Code (Monospace):** Essential for code snippets. Features ligatures that help students visualize complex logic.
 - H Visual Weight:** Use font-weight 500 for titles and 400 for descriptions to create immediate scannability.
- Line Height:** Standardize at 1.6 to ensure clear separation of technical terms and prevent "text clumping."

Section 02

Lower Third Implementation

| Anatomy of a Lower Third

Our lower third system uses a minimalist **#1E1E1E** container with dynamic accent bars to categorize information types.

 **Accent Bar:** 4px-6px vertical strip.

 **Title:** 14px-16px Semi-Bold white.

 **Subtitle:** 12px Medium grey.

Two Sum

$O(N)$ Time · $O(N)$ Space

Complexity Warning

$O(N^2)$ - Nested Loop

| Dynamic Categorization

Blue: Context

General information, lesson titles, and supplementary facts. Neutral and grounding.

Yellow: Alert

Complexity warnings, potential pitfalls, and "Key Takeaways" that require focus.

Green: Result

Final solutions, successful test case passing, and optimization confirmations.

Section 03

Visual Call-out Mechanics

| The 3-Step Call-out Logic

01 **The Dot:** 10px marker on target logic.

02 **The Line:** 1.5px draw-animation connector.

03 **The Box:** Reveal descriptive text overlay.

Cognitive Load Rules

RULE PARAMETER	INSTRUCTION
Clutter Prevention	Never display Lower Thirds and Call-outs simultaneously.
Duration Limit	Call-outs should persist for 5-7 seconds maximum.
Container Style	No solid heavy boxes. Use 88% opacity dark containers.
Animation Ease	Use Ease-Out (Cubic-Bezier) for smooth, natural entry.

| The Production Workflow

Asset Design

Establish Inter/Fira font scales.

Code Capture

Record clean #121212 logic screens.

Overlay Sync

Time LT/Call-outs with audio cues.

Final Review

Ensure visual consistency across deck.
